

On the study of cock miles in relation to porn stars

A case study of Sasha Grey

Professor Richard Schädel

Revision 2

Abstract

1. Introduction

The Term “Cock Miles” First appeared on Urban Dictionary in September 22, 2010. Professor Richard Schädel is an expert in phallic measurement. After much debate over how to measure a “Cock Mile”, or how many miles of cock an average woman will travel. Professor Richard Schädel took an in depth look at one video and calculate the number of miles one actress takes in a video.

2. An introduction to the people involved.

We will be observing a pornographic video from actress Sasha Grey and an unnamed male actor. He seems to be 35 years old of Caucasian descent with an estimated 7 inch penis.

3. Use of Cock Mile Data in relation to sex robotics.

The Cock Mile is a unit of measurement used extensively in the Teledildonics and prosti-botics industry. With rigorous testing and research we can create machines that not only accurately mimic human movement but also speed. If a robot was to use too much force the result would be injury or death.

4. Richard Schädel

Professor Richard Schädel, is the head researcher at a leading Teledildonics firm based out of Berlin. He has spent over a decade researching robotics and how technology can impact sex lives. In 1995 he and a team of Academics attempted to make the first online sex device, called the cockenspiel, allowing users to simultaneously send and receive pleasure data over the internet across the world. However technological limitations at the time hindered progress.

In practice

5. Case Study observation

All numbers here are purely penis in vagina intercourse as the mouth and slapping a cock on her face do not count. The video in question was posted to a tube site under the title “Sasha Grey puts in some work” clocking in at 28 minutes and 42 seconds. However it only contained 18 minutes and 38 seconds of vaginal penetration.

Professor Richard Schädel counted the number of thrusts between each natural pause between the actors. For example if the actor pulled out to preform facial copulation Sasha or to slap her ass. It was then that the number was recorded and counting could resume. Because of this rather crude method there might be some statistical anomalies in his numbers.

6. Male performance

Professor Richard Schädel estimated a 7 inch penis. Again he might be off by +/- 5%. Acceptable margins.

So counting each thrust between natural pauses yields this table.

63	66	59
121	75	64
96	92	93
71	112	82
57	92	98
91	124	126

Number of thrusts preformed in the video.

7. Observations from the video

Using these numbers we calculate that we got about 1997 thrusts.

$$1997 * 7 = 13,979 \text{ inches of cock.}$$

$$\frac{13,979}{12} = 1,164 \text{ feet of dicking}$$

Finally we divide by 5280 (feet per mile)

$$\frac{1,164}{5280} = .22 \text{ cock miles}$$

.22 cock miles in 18 minutes (354.056 meters for metric folk).

From this we can say that Sasha Grey took a whopping .22 miles of cock in that 18 minute session.

This begs the question though. How can we find the elusive Cock's Per Hour (or CPH)?

8. Cocks Per Hour

We know that in 18 minutes Sasha traveled .22 miles.

$$\frac{60}{18.38} = 3.264$$

By multiplying by .22 we can find the final Cock Miles Per Hour measurement.

$$.22 * 3.264 = .72 \text{ CPH}$$

So with a nominal thrust vector and at a steady rate for one hour Sasha Grey would take a little under 3/4ths of a mile of rock hard sausage.

9. Determining CPH at home

According to the Canadian and American Sex Therapists they did some research into the time of the average duration of coitus. It ranges from 5 to 7 minutes. Now we can derive a formula that allows men to approximate the miles of cock they will lay in an average session. We will need the length of the appendage(as c) and average thrusts in 8 minutes.

Since we got 1997 in 18 minutes we can just divide that by two to get the number of thrusts in 8 minutes.

$$\frac{(C * 998)}{12} = \text{feet of cock}$$

$$\frac{(\text{feet of cock})}{5280} = \text{Cock Miles}$$

11. For Further Discussion

As a note to Sasha Grey, if you read this document we need peer review. If you are willing I'd suggest a pedometer attached to the male stars ass or cock. I'd also need the length of his dick in inches. For extra data someone should stand outside the film and keep track of the thrusts.
